

SUMMARY

Security Test Engineer specializing in Product Security Testing, Mobile Application Security, and VAPT (Vulnerability Assessment and Penetration Testing), with 1+ years of hands-on experience across Android/mobile applications and APIs for banking and financial domain clients. My work covers the complete VAPT and penetration testing lifecycle: testing the application to identify and validate security vulnerabilities, sharing findings with the development team for remediation, retesting and cross-checking once fixes are implemented to verify vulnerabilities are properly resolved, and preparing the final CVSS-rated security assessment report for stakeholders once all findings are closed. Completed 100+ production Android APK security assessments and tested 60+ applications using Frida for runtime security testing and validation. Regular toolkit includes Burp Suite, Frida, MobSF, JADX, and Apktool. Works directly with 10+ developers daily on remediation coordination, retesting, and formal security closure. Progressed from Security Test Engineer Intern to full-time Security Test Engineer.

TECHNICAL SKILLS

Android & Mobile Application Security: Android Application Security Testing, Mobile VAPT, Production Application Security, APK Reverse Engineering, Static Analysis, Dynamic Analysis, Frida Instrumentation & Hooking, SSL Pinning Bypass, Root Detection Analysis & Bypass, Emulator Detection Analysis & Bypass, Certificate Validation Bypass, Android Component Security, Application Integrity Testing, JADX, Apktool, MobSF, Android Debug Bridge (ADB), Android Studio, Android Virtual Device (AVD)

Web & API Security: Web Application Security Testing, API Security Testing, REST API Security, OWASP Top 10, OWASP API Security Top 10, Burp Suite Professional, SQL Injection, XSS, XXE, CSRF, File Upload Security, Broken Object Level Authorization (BOLA), IDOR, Authentication & Authorization Testing, JWT Security Testing, OWASP ZAP

Vulnerability Management & Reporting: Vulnerability Identification & Validation, Vulnerability Reporting, Vulnerability Assessment and Penetration Testing (VAPT), Product Security Testing, CVSS Scoring, CWE Classification, CVE Analysis, Proof-of-Concept Development, Security Assessment Reporting, Vulnerability Remediation Coordination, Retesting & Finding Closure, Developer Communication & Collaboration, Banking & Stakeholder Reporting, Secure SDLC

Tools & Platforms: Burp Suite Professional, Frida, JADX, Apktool, MobSF, OWASP ZAP, Nmap, Wireshark, SQLmap, Postman, Kali Linux, Ubuntu, Linux CLI, Bash, Python, JavaScript, Git, SSH

PROFESSIONAL EXPERIENCE

Security Test Engineer (Product & Mobile Application Security) January 2026 – Present

Wizzybox Private Limited · Client: Banking & Financial Domain (Ongoing) Bengaluru, India · Full-Time

★ Progressed from Security Test Engineer Intern to full-time Security Test Engineer based on performance and technical delivery.

- Own the complete VAPT lifecycle for production Android banking applications: initial security testing, vulnerability identification and validation, findings communication to development teams, post-fix retesting, and final CVSS-rated report preparation for stakeholders.
- Completed 100+ production Android APK security assessments covering static analysis, APK reverse engineering, dynamic testing, runtime security testing, and API security assessment — all on live banking and financial applications deployed to real customers.
- Developed and deployed custom Frida JavaScript instrumentation scripts across 60+ production applications to bypass SSL pinning, root detection, certificate validation, and emulator detection controls — enabling full runtime analysis and API traffic interception on hardened production banking applications.
- Performed APK reverse engineering using JADX and Apktool to review application logic, Android component configurations, security controls, hardcoded secrets, data storage implementations, and cryptographic configurations.
- Used MobSF for automated static analysis and Burp Suite for dynamic testing and API security assessment — identified and validated BOLA, IDOR, authentication and authorization weaknesses, insecure data handling, and injection vulnerabilities across banking REST APIs.
- Tested Android runtime security controls including root detection, emulator detection, USB and wireless debugging flags, developer mode, proxy and VPN detection, screen overlay, screen recording, app integrity, installation source validation, and anti-hooking protections.
- Authored 50+ CVSS-rated security assessment reports for banking and client stakeholders — with technical evidence, proof-of-concept steps, CWE classification, and developer-ready remediation guidance, prepared and submitted after all findings were retested and formally closed.
- Works directly with 10+ developers daily on vulnerability explanation, remediation coordination, retesting of fixed builds, and formal security closure — managing the full vulnerability lifecycle from finding to closure.

Security Test Engineer — Intern April 2025 – August 2025

Wizzybox Private Limited Bengaluru, India · Internship

- Performed Android application security testing using MobSF, JADX, Apktool, and Burp Suite — covering static analysis, application configuration review, and dynamic security testing on production applications from day one.
- Identified insecure data storage, hardcoded credentials, exported Android components, and misconfigured broadcast receivers — documented with structured reports and remediation recommendations.
