

UDAY G

Security Test Engineer | Android & Mobile Application Security | Mobile VAPT | API Security

Bengaluru, India | +91 7899169395 | udaygopalakrishna@gmail.com | [linkedin.com/in/uday-g-](https://www.linkedin.com/in/uday-g-) | udayg.netlify.app

SUMMARY

Security Test Engineer with **1+ years of hands-on experience** in Android/mobile application security, Mobile VAPT and API security for banking and financial applications. Completed **100+ production Android APK security assessments** and performed Frida-based dynamic testing across **60+ applications**. Own the complete VAPT lifecycle, from testing and vulnerability validation through remediation support, retesting and closure. Authored **50+ CVSS-rated vulnerability reports** and work with **10+ developers daily** on remediation. Core toolkit: Burp Suite, Frida, MobSF, JADX and Apktool, with testing aligned to OWASP MASVS/MASTG, the OWASP Mobile Top 10 and the OWASP API Security Top 10.

TECHNICAL SKILLS

Mobile Application Security: Android & Mobile Application Security, Mobile VAPT, Android APK Security Testing, APK Reverse Engineering, Static Analysis, Dynamic Analysis, Frida, SSL Pinning Testing, Root Detection Testing, Emulator Detection Testing, Certificate Validation, Android Component Security

API & Web Security: API Security Testing, Authentication & Authorization Testing, BOLA / IDOR, JWT Security Testing, Web Application Security Testing, SQL Injection, XSS, XXE, CSRF, File Upload Security

Standards: OWASP MASVS / MASTG, OWASP Mobile Top 10, OWASP API Security Top 10, OWASP Top 10, CVSS, CWE

Vulnerability Management: Vulnerability Validation & PoC, Vulnerability Reporting, Retesting & Remediation, Developer Coordination, Security Assessment Reporting

Tools: Burp Suite, Frida, MobSF, JADX, Apktool, OWASP ZAP, Postman, Nmap, Wireshark, SQLmap, Android Studio, ADB, Kali Linux, Linux, Python, JavaScript, Bash, Git

PROFESSIONAL EXPERIENCE

Security Test Engineer

Jan 2026 – Present

Wizzybox Private Limited

Bengaluru, India · Full-time

Client: Finacus Solutions Pvt. Ltd. — Banking & Financial Domain

- Own the complete VAPT lifecycle for production Android banking applications: security testing, vulnerability identification and validation, developer remediation support, retesting and final security assessment reporting.
- Completed 100+ production Android APK security assessments covering static analysis with MobSF, JADX and Apktool, APK reverse engineering, dynamic/runtime security testing and API security testing.
- Performed Frida-based dynamic testing across 60+ applications for runtime security testing and validation, covering SSL pinning testing and bypass, root detection, emulator detection, certificate validation and debugging checks.
- Reverse-engineered APKs with JADX and Apktool to review application logic, Android component configurations, hardcoded secrets, data storage and cryptographic implementations.
- Tested Android runtime security controls including USB and wireless debugging, developer mode, proxy/VPN detection, screen overlay and screen recording protections, app integrity, installation source validation and anti-hooking protections.
- Intercepted API traffic with Burp Suite to test authentication and authorization, BOLA/IDOR, insecure data handling and injection vulnerabilities across banking REST APIs.
- Conducted web application VAPT with Burp Suite and OWASP ZAP against OWASP Top 10 risk areas.
- Validated every finding with reproducible PoC steps, CVSS scoring and CWE classification, and authored 50+ CVSS-rated vulnerability reports with remediation recommendations.
- Work with 10+ developers daily on remediation, retesting of fixed builds and formal closure, then deliver the final security assessment report to stakeholders.

Security Test Engineer Intern

Apr 2025 – Aug 2025

Wizzybox Private Limited

Bengaluru, India · Internship

- Performed Android application security testing using MobSF, JADX, Apktool and Burp Suite, covering static analysis, application configuration review and dynamic security testing.
- Identified insecure data storage, hardcoded credentials, exported Android components and misconfigured broadcast receivers, documented with remediation recommendations.
- Supported vulnerability verification and security testing activities.

PROJECTS

Web Application Penetration Testing Lab | Burp Suite · OWASP ZAP · SQLmap · DVWA · WebGoat

- Tested deliberately vulnerable web applications (DVWA, WebGoat) across the OWASP Top 10, covering SQL injection, XSS, CSRF, broken authentication, session management flaws and broken access control.
- Practised authentication and session testing (login bypass, session token analysis, privilege escalation and request manipulation) using Burp Suite and OWASP ZAP.

CERTIFICATIONS
